

# jQuery Practice

## CIT 93 Week 8 Homework Assignment

*This exercise is designed to be done as individuals, but with consultation from your peers.*

Use jQuery to implement the following features in this week's grocery list page.

1. Use the 'cool' class to highlight a list item when the user has their mouse over the item. It should revert to orange when the user's mouse leaves the item.
2. When the user clicks on an item use the 'favorite' class to display a heart next to the item. Show the names of all favorited items in the paragraph below the list with an id of 'notes'.
3. When the user double clicks on an item change that item's class to 'complete' and then move the item to the end of the list. If an item is complete it is no longer a favorite and should be removed from the 'notes' paragraph.
