

Guided AJAX Example

CIT 93 Week 10 Assignment

This exercise is designed to be done as individuals, but with consultation from your peers.

Create the AJAX example from the end of chapter 8 using the Week 10 resources in Blackboard and the book. Unfortunately because we don't have a server to respond to these AJAX requests you will not be able to see the example work, but you will get a feel for the concepts and techniques. Try to gain a better understanding of what is happening in the code and in the browser.

Optional Hard Mode:

Hard Mode is designed for those who already have more advanced programming experience and want a bit more of a challenge. There are no addition points for completing an assignment in Hard Mode.

Create some buttons or links that correspond to the Maker classes in the descriptions.html file. Then when a user clicks on one of the buttons or links use the **load()** method or vanilla Javascript to load that only class's description to the page without reloading the entire page. This will work locally in your browser without a server. If you make the content to appear using a tasteful animation, that's cool.
